\* These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

High blood pressure damages blood vessels. This condition increases risk of stroke, kidney failure, heart disease and heart attack. According to recent studies, one in four U.S. adults has high blood pressure, but because there are no symptoms, nearly one-third of these people are unaware they have it. This is why high blood pressure is often called the "silent killer." Check with your doctor and make sure to get your blood pressure readings tested on a regular basis.

In a double blind, placebo controlled study, our patented 100% herbal formula has been shown to be very effective with positive results after 4-8 weeks of regular use with no known side effects.

A double-blind, placebo controlled human clinical trial was conducted in Bangor, Maine by Marshall-Blum Clinical Research, LLC associated with University of Maine and Case Western University to study the effects of the ingredients of Alistrol on maintaining healthy blood pressure.
